EDUCATION

California Polytechnic State University - San Luis Obispo

San Luis Obispo, California

Bachelor of Science in Computer Science **Concentration** Artificial Intelligence and Machine Learning

June 2026

On-Campus Activities: College of Engineering Ambassadors, Computer Science and Artificial Intelligence Club, Society of Women Engineers, Women in Software and Hardware

TECHNICAL SKILLS

Languages/Frameworks: Python Java C C++ DMBS/SQL UNIX shell Power BI

Certifications: AWS Certified Cloud Practitioner

Relevant Coursework: Data Structures Project Based Object Oriented Programming and Design AI/ML

Introduction to Computer Organization Systems Programming Discrete Structures Intro to Database Systems

Design and Analysis of Algorithms AWS AI Practitioner

Microsoft Learn Challenge | Ignite Edition: Build trustworthy AI solutions on Microsoft Azure

EXPERIENCE

People Tech Group

Redmond, WA

Generative AI Intern

June 2024 – September 2024

- Developed a secure, user-specific AI application for a travel agency, ensuring privacy and fairness, and providing personalized travel recommendations through AI-powered agents.
- Submitted eCR documents to the Anthropic Claude 3 Haiku model on Amazon Bedrock using natural language prompts, extracting specific data such as hospitalization status and treatment.
- Used Amazon Q Developer integrating tools such as Amazon Bedrock, Amazon Polly, and Amazon S3 for speech generation and analysis, along with advanced features like enhanced debugging with logs, anomaly detection, automated bug fixing, and test case generation, significantly reducing manual debugging efforts.

Prairie View A+M University

Remote, Texas

Summer Intern

July 2022 - August 2022

- Guided with tools required to begin learning in computer science, tech, and college.
- Certified of skills to become a savvy, self-starting achiever in a tech-centric world by mentor. Facilitate minimal downtime and optimization, while also automating daily tasks to minimize human error.
- Furthered knowledge about data science and AI through working on a research project assisting a computer science associate professor involving machine learning.

Computer Science and Artificial Intelligence Cal Poly Club

San Luis Obispo, California

Social Media Lead

June 2024 – Present

- Manage the club's social media team, coordinate meeting times, and create sprints to delegate weekly tasks.
- Implement targeted social media campaigns, to result in a marked increase in customer interaction and engagement across key platforms.
- Lead initiatives to develop projects, workshops, and lectures to enhance members' understanding of AI.

PROJECTS

Responsible AI - Travel Agent

- Developed an AI application for a travel agency, utilizing Amazon Bedrock with Guardrails to enforce ethical standards and filter out unrelated content such as politics and finance.
- Implemented Amazon Comprehend for toxicity detection, ensuring harmful content is filtered from AI-generated responses.
- Used Google Search API and AWS Bedrock models to verify the accuracy of travel information, upholding Responsible AI principles to ensure transparency, fairness, and accountability.

HTTP Webserver Development

- Designed and implemented a multi-process HTTP web server in C, supporting concurrent requests for static content such as HTML, CSS, and images, with robust error handling for malformed requests and missing files.
- Added server-side dynamic content generation by securely executing CGI-like scripts, managing arguments, and handling input/output streams efficiently.
- Utilized debugging tools like Valgrind and GDB to optimize memory usage and performance, ensuring compatibility with web browsers and conducting load testing to benchmark response times.

Huffman Coding Algorithm

- Imposed a data compression algorithm, Huffman Coding Algorithm, to decode and code files while being able to achieve computational complexity in $O(n \log(n))$ runtime with reduced filing size of up to 75% in certain test cases.
- Optimized priority queues and search trees used to reduce file size by respectively accounting for character occurrence frequency in the inputted file and ASCII value memory through proper string orientation.
